Coil Separation Made Easy!

Problem 1

After years of experience serving the steel and aluminium industry Integrated Wood Components (IWCI) recognized issues created by various types of coil separators. In response, we invented Snap-Stix™ to help protect coils, improve safety and reduce costs.

Problem 1

Finding a suitable product that does not crush under the heavy weight of coils stacked on top of each other.

Solution 1

Snap-Stix™ are a wood based product that will not crush under the weight of coils stacked on top of each other.

Problem 2

Problem 2

Most solid wood has moisture content between 28% - 58% causing rusting and oxidation noticeable to down stream users.

Solution 2

Snap-Stix™ moisture content is always between 4% and 6% virtually eliminating the issues of moisture transfer.

Problem 3

Problem 3

Cutting materials to the correct length for a variety of roll diameters is both labor and cost intensive.

Solution 3

Snap-Stix™ are “kerfed” at various intervals so anyone can easily “snap” each stick. This eliminates the costs of skilled labor.

Problem 4

Problem 4

Solid wood sticks have a natural tendency to splinter creating dangerous situations for workers and down stream users. Disposal of these materials are difficult and unsafe.

Solution 4

Snap-Stix™ are made of small fibers of wood pulp, normally recycled product or wood waste, mixed with emission free binders that will not splinter and are easily disposed of.

Snap-Stix™ is an environmentally friendly, moisture resistant, splinter free, strong coil separator and is a fraction of the cost of other materials. Snap-Stix™ offer all the physical properties necessary to properly and safely ship, store and protect coiled metal products. It's a Snap!

SNAP-STIX™

The Solution

Other IWCI Solutions:

- In-plant pallet boards.
- Circle and Octagon roll separators.
- Many other solutions are available.

Quality packaging materials from the source.

Made in America by Americans.
